

# Idea Hatch: STEAM for Kids

## Sparks and Spooks

Join the program *LIVE* online!

Oct 8th at 4pm

[jclibrary.info/events](http://jclibrary.info/events)

1. Blow up the balloon.

2. Rub the balloon with wool or terry cloth. This moves

positive+ electrons to the balloon. Now it will move light weight things.

3. Cut out little ghosts from the plastic bag and use the charged balloon to make them dance.

4. Move the charged balloon close to the can to pull it without touching.

5. Do you know other tricks? How else can you make electricity?

(Living animals might choke on your balloon before it decomposes. Make sure to cut it into small pieces and throw away in a sealed bag, like your home garbage.)

Earliest balloons were made from animal intestines, and twisted into animal shapes!
